

*Smarter together.*

## Smart Meters

# Phase One Deployment Map

The three areas included in Phase One provide a strategic snapshot of our larger service territory: a dense, urban area; natural gas-only; and a full feeder area.

We'll deploy about 3,800 smart electric meters and smart gas modules over a three-month period to approximately 1,900 customers. Then we'll spend the next few months monitoring and evaluating in order to make any necessary adjustments before we head into major deployments in Phase Two (2019–2020).
