

Annual energy efficiency program filing in Washington

Helping our customers use energy wisely is important to us. Each year, our customers achieve significant energy savings and receive rebates and incentives through Avista's energy efficiency programs. The Commission approves the amount of funding for these important programs through a portion of our customer's energy rates.

On March 14, 2017, we completed a required, annual filing related to the energy efficiency programs we provide in Washington. This filing is a report to the Commission that includes funding information and energy savings results for 2016. It acts as a true-up, adjusting the amount of funding needed to run the programs, including the rebates and incentives paid to customers, so that it aligns with the costs to deliver the programs. If approved, residential electric customers in Washington could expect to see a \$0.79 per month increase and residential natural gas customers in Washington could expect to see a \$0.82 per month decrease in the price they pay for energy, based on average monthly usage (957 kWhs and 66 therms). These changes would begin June 1, 2017.

Avista's programs are based on providing a financial incentive, or "rebate," for cost-effective efficiency measures with a simple payback less than 15 years. This includes approximately 300 measures that are packaged into about 30 programs for customer convenience. You can learn more about the energy efficiency programs we offer at avistautilities.com/savings.
